Subject: Drought Emergency Water

Hello John

Just following up with you from Friday's meeting.

Do you have any emergency projects you would be able to implement in the next few months that will help you get through the summer? We need to avoid areas with wildlife concerns, especially endangered species, heritage concerns, or anything else that would necessitate lengthening the process. These projects will be considered permanent and any info you can get me on location, i.e. Lat. Long., flagging the area, and any other specifics such as how, size, access, etc. would greatly help out. Also if you have multiple projects could you prioritize them on a need basis.

Thanks!
