NEED STATEMENT – PROBLEM ANALYSIS: The need of water sources in 23S is part of the overall long-term habitat needs that will improve deer habitat and sustain a viable to growing population. GMU 23 South used to sustain a much larger deer herd. Part of the problem with the depressed population that currently exists is water availability. The Juniper and Walnut areas have a growing mule deer herd.

PROJECT OBJECTIVES: This project relocates the existing drinker off of an archeological site and adds a 1500 gallon storage tank. It is also planned to convert an existing windmill well into a more reliable water source.

PROJECT DESCRIPTION AND STRATEGIES: The Rocky Dublin well is currently a wind driven well which is not producing due to the lack of wind. It also has a drinker that is located near an archeological site. The well will be converted into a solar powered pump and pipe will be laid approximately .5 miles to a concrete drinker with a built in wildlife use/escape ramp.

This project is NEPA ready. The EAC is to be completed. Archeological Clearances and Categorical Exclusions have been completed by the Forest Service for the poly pipe, drinker and 1500 gallon storage tank. The conversion of the windmill to a solar system is in the process of being cleared by The Tonto Ranger District but has yet to be cleared by the Forest. An updated proposal will be submitted once permission is granted.

PROJECT LOCATION: This project is located in the Tonto Basin Ranger District near Lower Juniper Canyon, just East of Forest Road 71. See attached map.
