

File Code: 2210

Date: December 2, 2022

(b)(6)

(b)(6)

Dear (b)(6)

The following are your 2023 annual operating instructions (AOI) for the 7/K grazing allotment. These instructions have been developed from collaboration with you and in consideration of Forest Service Handbook 2209.13, Tonto National Forest Plan, associated National Environmental Policy Act analysis, Allotment Management Plan, and available information describing range conditions.

**Authorized Use**

The following table describes authorized livestock numbers per grazing unit, anticipated use dates, and proposed monitoring dates. Please request a change in this schedule well in advance of the proposed dates. Please, maintain and submit records that indicate your compliance to permitted use.

Grazing Unit	Dates of Use	Tentative Monitoring Date	Authorized Livestock	Rationale/Comments
North Ash Creek	Current-December 31 2022	January 9 <sup>th</sup> 2023	54 Cows 6 Bulls 6 Horses	Using water, mineral and herding use of livestock has been mostly north of Numex Well.
South Ash Creek	January 1, 2023- March 31 <sup>st</sup>	April 10 <sup>th</sup>	54 Cows 6 Bulls 6 Horses	Using water, mineral and herding livestock use will be moved to the southern position of the pasture.
Lower Buck Basin	April 1 <sup>st</sup> - June 30 <sup>th</sup>	July 10 <sup>th</sup>	54 Cows 6 Bulls 6 Horses	Natural boundary and lower numbers work to keep cattle in the lower section of this pasture
Upper Buck Basin	July 1 <sup>st</sup> - September 31 <sup>st</sup>	October 9 <sup>th</sup>	54 Cows 6 Bulls 6 Horses	Use of this pasture is dependent of the boundary fence being replaced. Red Hills can be used as a backup.
Mountain	October 1 <sup>st</sup> - Next AOI	Next AOI	54 Cows 6 Bulls	

			6 Horses	
--	--	--	----------	--

**Monitoring:**

Upland utilization is measured at the end of the growing season in key areas for key forage species. This information, along with vegetation condition, forage plant production and vigor, soil and watershed condition, will be used to make informed management recommendations concerning pasture moves and stocking rates.

Riparian utilization in key reaches is measured during growing season to verify residual vegetation is present for streambank protection during flow events.

Grazing intensity will be evaluated during the growing season to make necessary changes needed for plant development and recovery.

**Vegetative Use Guidelines:**

Grazing will be managed so conservative use levels are achieved over the long-term in pasture key areas. It is your responsibility as permittee to take action so that livestock grazing does not exceed vegetative use thresholds. Please arrange for an allotment inspection if seasonal vegetative use of available forage approaches these thresholds.

<b>Vegetation</b>	<b>Use Threshold</b>
Upland herbaceous species	30-40% of current year's growth
Upland browse species	50% of current year's growth
Riparian herbaceous species	Limited to 40% of plant species biomass and maintain 6-8 inches of stubble height on deergrass
Riparian woody species	Limited to 50% of leaders browsed on upper 1/3 of plants up to 6 feet tall
Streambanks (if applicable)	Limited to less than 20% alteration of alterable streambanks
Mexican Spotted Owl PAC's (where applicable)	20% optimum-40% maximum
Annual Grasses	50% of current year's growth

**Range Improvement Maintenance:**

All range improvements must be maintained to Forest Service standards before cattle will be allowed to enter the units. You must receive verbal concurrence for each project before work can begin except routine maintenance (e.g. cleaning dirt tanks, maintaining fence, restoring pipe). It is your responsibility to be aware of and comply with fire restriction.

The following table describes 2023 range improvement projects.

<b>Pasture</b>	<b>Location</b>	<b>Description of Work</b>	<b>Clearances Needed</b>
----------------	-----------------	----------------------------	--------------------------

Ash Creek	Ash Creek Well Water System	Replace burned pipeline from holding pasture to the corral (about 1/2 mile)	None. Existing improvement
Ash Creek	Leonard's Well.	Clean out and utilize existing well at Bumble Bee wash	None so long as existing footprint and use is not exceeded. (Existing Improvement)
Mountain	Middle Water Pipeline	Replace water line at middle water	None. Existing improvement.

**Salting:**

In most cases, salt must be located no closer than 1/4 mile from streams, rivers, riparian areas, trails, and known archaeological sites.

**Supplements and Attractants**

Protein blocks, nutritional supplement, and other attractant may be authorized.

**Supplemental Feeding:**

No supplemental feeding is authorized.

**Weeds**

Invasive plants threaten ecosystem health and grazing resources. Please assist us in preventing the introduction and spread of invasive plants.

If you have any questions, please contact Eric Hoskins, Rangeland Management Specialist, at (602) 225-5332.

Sincerely,

(b)(6)

Jeremy Plain  
District Ranger
