Jared C. & Cassandra L. Lyman  
PO Box 190  
Tonto Basin, AZ 85553

Dear Jared and Cassie:

This Annual Operating Instruction is a guide for management of the **Bull Springs allotment** for the **2025 grazing year**. This plan is made part of your Term Grazing Permit as specified in Part 2, Number 8(a) of the permit and supersedes any previous AOIs for these allotments.

#### **I. PERMITTED USE**

The following table illustrates the number of livestock and period of use permitted on the **Bull Springs allotment** as per Term Grazing Permit #12283 issued to Jared C. and Cassandra L. Lyman

KIND	CLASS	NUMBER	SEASON OF USE
CATTLE	MATURE COW	160	3/1 - 2/28

#### **II. AUTHORIZED USE**

The following numbers and classes of livestock are authorized to graze on the **Bull Springs allotment** this year.

KIND	CLASS	NUMBER	SEASON OF USE
CATTLE	COW/CALF	144	3/1 - 2/28

\*Initial stocking rate is 60 head but will gradually increase to the full authorized number.

#### **III. ROTATION SCHEDULE**

Actual dates may vary depending upon climatic conditions, wildfire, noxious weeds, soil, and range conditions, conflicts with or for protection of wildlife, water availability, utilization levels and time required to move livestock. Any deviation from this schedule should be discussed with Payson range staff prior to moving your cattle outside of the dates listed. Estimates of forage utilization will be performed and documented on pastures about the time the pasture is vacated.

AUTHORIZED PASTURE	CLASS OF LIVESTOCK	NUMBER	SEASON OF USE
BULLFROG, OAK GROVE, WEST RIVER	COW	144	3/1 - 9/30
BULL SPRINGS, COTTONWOOD, BRUSH CORRAL	COW	144	10/1 - 2/28

\*Permittee will develop livestock numbers using rotation of East Verde River or Oak Grove, West River, and Bullfrog pastures in the event the permittee puts in more than one.

#### **IV. ALLOWABLE USE STANDARDS**

The use on key species in key areas will ultimately determine the length of the grazing period in each pasture. The establishment of the utilization standards is consistent with 36 CFR 222 regulations, FSM 2210 and 2230, and FSH 2209.21.

Grazing will be managed so that conservative use levels are achieved over the long-term. Considerable research has been done showing that conservative use levels will allow for sustaining and improving watershed conditions. Conservative utilization levels are as follows:

<b>Upland</b>	Herbaceous:	30-40% of current year's growth
	Woody:	50% of current year's growth
<b>Riparian</b>	Herbaceous:	40% of plant species biomass (any species) and maintain 6-8 inches of stubble height on Deergrass
	Woody:	50% of leaders browsed on upper 1/3 plants up to 6 feet tall
<b>Mexican Spotted Owl PAC's (Where Applicable)</b>	20% optimum to 40% maximum Management Mexican Spotted Owl and Northern Goshawk habitats within the allotment are according to standards and guidelines in the Tonto NF Plan (pages 40-1 through 40-13).	

Utilization is measured at the end of the growing season, in key areas<sup>1</sup> for key forage species<sup>2</sup>. However, grazing intensity will be evaluated during the growing season in order to practice proactive management and make necessary management changes needed for plant development and recovery. Utilization measurements serve as only one piece of information that is considered when evaluating the effectiveness of allotment management. Utilization data will be coupled with other information such as vegetation condition, forage plant production and vigor, soil and watershed condition, and long-term trends, in order to make informed management recommendations concerning pasture moves and stocking rates.

Trailing livestock along stream banks and riparian areas is prohibited except to cross a drainage to access another pasture or where no other trailing route exists

Bull Springs permittee will not use Belluzzi or Pocket holding traps or Doll Baby Administrative Site during the breeding season from May 25 through September 30 each year to ensure short-term grazing operations do not disturb breeding cuckoo. Any critical activity that must occur during the breeding season will be coordinated with the district wildlife biologist to ensure activities do not impact cuckoos or their habitat. Critical activities could include temporary holding, nursing, doctoring, branding, or castrating; these activities generally do not exceed 48 hours at a time.

<sup>1</sup> Key areas are defined in the Tonto NF Plan (pg. 42-1) as being ¼ to 1 mile from water, located on productive soils on level to intermediate slopes, and be readily accessible for grazing.

<sup>2</sup> Key forage species are defined in the Tonto NF Plan (pg. 42-1) as plants chosen to be appropriate to monitor average allowable use.

## **V. MONITORING**

Monitoring dates are tentative, and some may not be required. Range personnel from the Payson District may be contacting you prior to monitoring visits. We encourage your participation in these inspections, as it provides an opportune time to discuss resource conditions and management items. VGS Monitoring may be conducted in the fall. A priority for monitoring may be based upon those allotments with forthcoming NEPA.

## **VI. ADMINISTRATION**

The table below indicates the records submitted by the permittee to satisfy the Ownership Requirement portion of the permit. The permittee must hold ownership of the corporation (if applicable), deed for the base property, and brand associated with that permit for the entire term of the permit. Any undocumented changes in ownership are a violation of the terms and conditions of your term grazing permit under Part 2, Sec. 7.

<b>Entity/Person(s) Designated as Permittee</b>	Jared C. & Cassandra L. Lyman		
<b>Base Property</b>	Deed Held By: Jared C. & Cassandra L. Lyman (b)(4)		
<b>Brand</b>	Owner: Jared C. & Cassandra L. Lyman	#989 Expires: July 15, 2026  #12270 Expires: April 15, 2029	(b)(4)

We request that you maintain records that reveal the number of livestock, date of entry, and the date of livestock leaving each pasture and submit them to us at the end of the grazing season.

## **VII. SALT AND MINERAL BLOCK**

Salting may be used to aid in livestock distribution and management. Salting must be located no closer than ¼ mile from streams, rivers, riparian areas, trails, and known archaeological sites.

## **VIII. RANGE IMPROVEMENT CONSTRUCTION / MAINTENANCE**

The permittee shall maintain all range improvements that are assigned for maintenance in the Term Grazing Permit. All work involving the use of heavy equipment will be accomplished only after prior approval of the Forest Officer in charge of the allotment.

## **IX. PROTECTION**

The permittee, his agents and employees, when acting within the scope of their employment, and his contractors and subcontractors will protect the land and property of the United States, waived private land and other land under jurisdiction of the Forest Service covered by and used in conjunction with this permit.

**X. ALLOTMENT INSPECTIONS**

Forest personnel may conduct periodic brief inspections of pastures within the allotment at any time to verify actual use, improvement conditions, or other non-range related activity.

**XI. PERMIT CONDITIONS**

Failure to comply with any of the terms and conditions specified in Parts 1, 2, and 3 of your Term Grazing Permit may result in suspension or cancellation, in whole or in part, after written notice. This is found in Part 1, Section 3, of your permit.

Sincerely,

Jason McInteer  
Deputy District Ranger
