Modification

2025 Annual Operating Instructions

Cartwright Allotment

This AOI Modification is a guide for management for the 2025 grazing year. The pasture rotation will remain as originally documented with changes as follows:

<u>Pasture</u>	<u>Numbers</u>	<u>Dates</u>
6L	350 C/C	Mar 01 – *Apr 30
Quien Sabe	350 C/C	Apr 01 – *July 31
Bronco	350 C/C	July 01 – *Oct 31
Grey's Gulch	350 C/C	Oct 01 – *Jan 31
Maverick	350 C/C	Jan 01 – Feb 28
Humboldt	Rest	

**We authorize a 30-day overlap for pasture moves to allow an interim of livestock work at the base property during transitions.*

During the regular rotation, a modification will be interjected for a two-week period or less. The objective is to address two sections within Greys Gulch and Bronco Pastures where annual invasive grass and forb growth has increased in density from the precipitation in recent weeks. The arrangement will reduce the plant material that will later become hazardous fuels and provide needed forage for the permitted livestock on the allotment without negatively affecting the perennial native plants.

The sections illustrated on the map provided in this document are along the main access road (FR24) and will be stocked as follows:

Blue – 20 Cows, duration of 2 weeks or less.

Red – 50 Cows, duration of 2 weeks or less.

The permittee will be responsible for holding cattle within these areas as close as possible with frequent monitoring of cattle location and vegetation. Waters must be available within both areas.
