

File Code: 2210; 2230
Date: March 12, 2020

Tom and Tamra Kelly
Arrow T Land and Cattle Company, L.L.C.
9400 West Middle Place Road
Prescott, Arizona 86305

Dear Mr. and Mrs. Kelly:

This document serves as your 2020 Summer Annual Operating Instructions (AOI) for the Dog Knobs and Elk Springs Allotments. This AOI is part of your Term Grazing Permit as provided for in Part 2, Section 8(a).

I. AUTHORIZED LIVESTOCK NUMBERS / PERIODS OF USE

Your 2020 Authorized Use Request has been approved and you are authorized the following Livestock Numbers and Periods of Use:

Elk Springs	04/01/2020 – 09/15/2020	46 cow / calf
Dog Knobs	09/16/2020 – 01/31/2021	46 cow / calf

Any changes to the 2020 authorized livestock numbers will require that you file an additional Authorized Use Request. Be advised that the Forest Service will need a minimum of 45 days to assess resource conditions and process a supplemental grazing bill for additional livestock. Please contact your Rangeland Management Specialist Cherie Owens prior to making any decisions regarding increased livestock numbers.

II. GRAZING SCHEDULE

The following is the planned grazing sequence and planned livestock numbers for the 2020 grazing period. Pasture move dates shown are an estimate and may need to be amended based on actual conditions.

Changes from the grazing schedule will be made only with Forest Service approval. The planned use period in a pasture may be shortened or lengthened depending on forage availability and utilization in key areas. Additionally, adjustments in the planned livestock numbers and pasture rotation may be necessary depending on weather and resource conditions.

Livestock pasture moves will be completed within a ten (10) day period and livestock will be actively herded from on pasture to another. It is imperative that once a pasture move occurs, the livestock remain within the designated pasture. For various reason (i.e. pasture gates left open, cattleguards not maintained, cut fences, etc.), cattle may stray from the designated pasture.

Preventing livestock from grazing adjacent allotments, any rested pastures, or re-grazing previously used pastures not permitted is the permittee's responsibility.

Elk Springs:

Pasture	Time Frame	Livestock Numbers
RS	04/01 – 06/01	46 Cow/Calf
W Triangle	06/02 – 06/15	46 Cow/Calf
Flannigan	06/16 – 08/15	46 Cow/Calf
Webster	08/16 – 11/01	46 Cow/Calf
Miller	Rested	0

III. DROUGHT MANAGEMENT

Drought is an inevitable occurrence in the southwestern United States. Both the Forest Service and grazing permittees must plan for drought as a normal part of management. During periods of drought, the following management actions may be necessary:

1. Stocking levels may need to be reduced. Reductions may be necessary prior to the permitted season of use and/or during the permitted season of use.
2. Season of use may need to be shortened. Depending on the severity of the drought and the stocking level, a reduced grazing season may be necessary.
3. Pasture use periods may need to be shortened. Pasture will not be re-grazed during the same grazing season and this may ultimately result in an early exit from the allotment.
4. Utilization and/or seasonal (grazing intensity) standards may need to be reduced. Depending on the severity of the drought and the stocking level, reduced utilization standards will likely result in shortened pasture use periods and may ultimately result in an early exit from the allotment.
5. Lack of livestock water, or poor distribution of livestock water, may result in reduced pasture/allotment use periods. Depending on forage conditions, this effect may be mitigated by hauling water to temporary livestock watering facilities.
6. Allotment Management Plan direction for pastures requiring rest or deferment will be followed. Livestock use of planned rested pastures due to drought will not be authorized.

IV. GRAZING STRATEGY

Graze livestock per recommendations listed in the Elk Springs/Dog Knobs Allotment Management Plan (AMP) such that a deferred rotation system is carried out each grazing year. This grazing management system will allow more rest to plants during the growing season.

V. ALLOWABLE UTILIZATION STANDARDS

The maximum allowable use will be 40% utilization in key areas and livestock will be moved to the next area when grazing intensity approaches this conservative level. The allowable use level is the utilization level permitted by both livestock and wildlife.

VI. SEASON OF USE

The grazing management system will incorporate a deferred rotation system to allow more plants to rest during the growing season. Historically, Dog Knobs has been utilized as a winter allotment, and Elk Springs has been utilized as a summer allotment. Range managers will adjust the timing, duration, and frequency of livestock grazing in areas that are identified with declining conditions via Annual Operating Instructions or notices to the permittee.

VII. RESOURCE MONITORING

Forage Utilization

Forage utilization within each pasture will be monitored and the allowable utilization standards (Section V) and the seasonal utilization guideline (Section V) will be enforced. This may result in earlier pasture moves than indicated in the Grazing Schedule (Section II). Forage utilization monitoring will occur at locations within pastures using the “key area” concept. Key areas are defined as “. . . a portion of range, which because of its location, grazing or browsing value, and/or use, serve as an indicative sample of range conditions, trend, or degree of use seasonally. A key area guides the general management of the entire area of which it is a part.” Key areas will generally have the following characteristics: they will be approximately 20 to 500 acres in size; they will be located on productive soils with slopes less than 15%; they will have a plant community that is representative of the larger area; and they will generally be located 0.25 to 1.0 miles away from livestock water sources.

Forage utilization monitoring and its specific application to your allotment should be discussed with your Rangeland Management Specialist Cherie Owens. Permittee participation in utilization monitoring is encouraged.

Permittee Monitoring

The permittee will monitor and document the following items on the enclosed Actual Use and Forage Utilization Monitoring Form: 1) Actual Grazing Period; 2) Actual Livestock Numbers; and 3) Average Utilization of all forage species at two different time periods; just prior to livestock entering the pasture, and immediately after livestock leave the pasture. **It is very important that this monitoring be completed during the time frames specified, and that the Forage Utilization Monitoring Form is submitted to your Rangeland Management Specialist Cherie Owens at the end of 2019 grazing period.**

VIII. MITIGATION MEASURES FOR SPECIAL STATUS SPECIES

There are no threatened and endangered species or critical habitat within the allotment. No mitigation measures are currently required for listed Federal, State, and Forest Service special status species. However, sensitive plant surveys will be completed in suitable habitat before construction of any new range improvements. Surveys will not be necessary if the construction will occur in an area that is disturbed, such as existing roads and ditches or existing earthen tanks. Coordination with the South Zone Botanist should occur if any sensitive plant species are located.

IX. RANGE IMPROVEMENTS

Construction of New Structural Range Improvements

No construction of new structural range improvements has been requested or approved for this grazing season.

Removal of Structural Range Improvements

There are no structural range improvements scheduled for removal this year.

Existing Structural Range Improvements

You have requested to clean the following tanks once suitable (i.e. dry) conditions are met at each tank listed below. Cleaning of tanks must be confined to the original footprint. Please contact Rangeland Management Specialist Cherie Owens a minimum of 45 days before any ground disturbing activities are to begin to acquire proper clearances on the site and to complete a letter authorizing the ground disturbing activity.

Elk Springs Allotment:	North Flanigan Tank (#002367)	Flanigan Pasture
	Flanigan Tank (#002055)	Flanigan Pasture
	W Triangle Tank (#002056)	W Triangle Pasture
	West Elk Spring Tank (#002057)	W Triangle Pasture
	Sego / Seco Tank (#002058)	RS Pasture
	RS Tank (#002059)	RS Pasture
	Corner Tank (#001916)	RS Pasture
	Miller Spring Tank (#002060)	Miller Pasture
Dog Knobs Allotment:	Webster Tank (#002248)	South Pasture
	Dry Lake Tank (#001930)	South Pasture

Structural range improvements assigned to you for maintenance are listed in your Term Grazing Permit and are also identified on the allotment map. These improvements are to be fully maintained annually to comply with permit requirements (Part 2, Section 8i and Part 3, Section 3a). Any maintenance you perform must conform to the standards specified by your District Rangeland Management Specialist Cherie Owens. The grazing permittee is responsible for all maintenance materials, supplies, and equipment necessary to properly maintain all range structural improvements. The Forest will replace range structural improvement materials and/or supplies at the end of the improvement's life; when maintenance and repair is no longer feasible to keep the improvement properly maintained and functioning. **Please note that you must notify your Rangeland Management Specialist Cherie Owens at least 45 days prior to the beginning of any maintenance work that requires the use of heavy equipment.**

X. SALTING, PROTEIN BLOCK, and USE OF HAY AS A SUPPLEMENTAL FEED

Salting and Protein Blocks:

Proper salt and protein block location can be a good tool to aid in livestock distribution. They will be used in a manner to spread livestock utilization throughout the pasture. The following guidelines will be used when placing salt and protein blocks:

1. In general, salt and protein blocks should not be placed within $\frac{1}{4}$ mile of water. Locate salt/protein blocks where forage is abundant and utilized less than average.
2. Salt and protein blocks will not be placed in areas of depleted range, erosive soils, or sensitive plant or animal species. Areas of sensitive plant or animal species will be identified by your Rangeland Management Specialist Cherie Owens and included in each year's AOL
3. Limit supplement types to non-emergency feeds such as salt, protein, and mineral blocks. No more than three blocks (50 lb. blocks) of salt/protein will be placed at any location at any one time.
4. Salt/protein will not be placed at the same location twice during the same grazing season.
5. The use of portable salt/protein block containers is encouraged but not mandatory.

Supplementing with Hay:

Supplementing with hay may be approved for use on Forest allotments provided it is used as a deficiency supplement during sustained unusual heavy snow/ice events. It will only be allowed for a specific location and time under the discretion of the District Ranger. Only certified weed-free hay may be authorized to prevent the spread of noxious weeds. Supplemental feeding will not be used in place of forage if forage runs low within a pasture.

This direction is to supersede past Annual Operating Instructions as a Best Management Practice (BMP) unless differing instructions are specifically noted within an allotment NEPA decision.

XI. PORTABLE WATER HAULING

Temporary sites for portable haul water may be needed and should be used as necessary to assist in livestock distribution. The following requirements will apply to portable haul water locations:

1. Coordinate with your Rangeland Management Specialist Cherie Owens to identify portable water haul locations for individual pastures prior to the grazing period.
2. To aid in livestock distribution, the portable water haul locations should generally be in areas of light forage utilization.
3. Generally, portable water haul locations will not be located at sites used in previous years.
4. Portable water hauls will not be located in areas of depleted range, erosive soils, or sensitive plant or animal species.
5. Portable water haul locations will be moved when the desired forage utilization levels have been reached.
6. Portable haul water storage tanks and trough will be removed when livestock leave the pasture.

XII. FIRE

Please use caution during all ranch activities that could potentially start a fire. All ranch vehicles must be equipped with an axe, shovel, and water bucket. All open camp and branding fires required a ten foot fire ring cleared down to mineral soil.

During periods of critical fire danger the Forest Supervisor may declare a Red Flag Alert or issue other special orders. Under these conditions, the building or use of fires, the use of power saws, heavy equipment, ATVs and other motorized equipment may be prohibited on Forest Service land. All Federal, State and Local fire restrictions and regulations must be observed.

Report all fires to the Williams District Office at (928) 635-5200 or the Kaibab National Forest Supervisor's Office at (928) 635-8200.

Cooperation in the reporting, prevention, and suppression of fires will be expected as specified in Part 2, Section 10 of your Term Grazing Permit.

XIII. MOTOR VEHICLE USE/RESTRICTIONS

On July 9, 2010, the Kaibab National Forest began implementation of the Travel Management Rule (TMR). The TMR requires the designation of roads, trails, and areas open to motor vehicle use and these routes are identified on the Motor Vehicle Use Map. Implementation of the TMR requires active management of all motorized use, including use related to permitted grazing activities. Motorized travel off the designated road system, including off-road access, by grazing permit holders will be based on the need to carry out required management practices necessary to comply with the terms and conditions of the Term Grazing Permit #07899. Examples of required management practices include but are not limited to: the repair and maintenance of structural range improvements; transport and placement of mineral and protein supplement; herding of livestock; and tending to sick or injured animals. Legitimate motorized use off the designated

road system, including off-road access, for conducting activities required under the Term Grazing Permit will be authorized as follows:

1. **For motorized use with ATVs, UTVs, motorcycles, and full-size pickup or smaller vehicles (curb weight less than 8,000 pounds):** Grazing permittee must obtain a grazing allotment specific Restricted Road, trail and Off-Road Administrative Use Permit. Motorized vehicles use off the designated road system will be limited to only that use which is necessary for compliance with the terms and conditions of the Term Grazing Permit.
2. **For motorized use with larger vehicles (curb weight greater than 8,000 pounds or larger than a full-size pickup) or any heavy equipment:** Grazing permittee must obtain a site-specific Restricted Road, Trail and Off-Road Administrative Use Permit. Motorized vehicle use off the designated road system will be limited to only that use which is necessary for compliance with the terms and conditions of the Term Grazing Permit.
3. **To request site specific Restricted Road, Trail, and Off-Road Administrative Use Permit,** the grazing permittee must provide their Rangeland Management Specialist with the project details a minimum of 30 days prior to the proposed starting date for the permit.
4. A copy of the approved Restricted Road, Trail, and Off-Road Administrative Use Permit must be with the vehicle operator while operating the vehicle off the designated road system.
5. A Permit Placard must be attached to all permitted vehicles while operating off the designated road system.
6. Off-Highway vehicles (ATVs, UTVs, and motorcycles) used for conducting activities required under the Term Grazing Permit must be licensed and permitted in accordance with Arizona State Law.
7. The Motor Vehicle Use Map for the Kaibab National Forest identifies certain roads as “Roads Open to Highway Legal Vehicles Only”. These roads are open only to motor vehicles licensed under State law for general operation on all public roads within the state. Grazing permittee operating motor vehicles on these roads must comply with the legal requirements. Operating a motor vehicle off the designated road system to avoid the legal requirements of “Roads Open to Highway Legal Vehicles Only” is not permitted.
8. Grazing permittees will utilize motorized vehicles off the designated road system in a manner that will not result in damage to soil, watershed, vegetation, wildlife, heritage, or other forest resources.
9. Failure to comply with the conditions of the Restricted Road, Trail and Off-Road Administrative Use Permit may result in the immediate cancellation of the Restricted Road, Trail and Off-Road Administrative Use Permit and may result in the issuance of a Notice of Non-Compliance for violation of the terms and conditions of your Term Grazing Permit.
10. Grazing permittees that do not obtain a Restricted Road, Trail and Off-Road Administrative Use Permit are required to operate motorized vehicles only on the designated road system. Operation of a motorized vehicle off the designated road system without a valid Restricted Road, Trail and Off-Road Administrative Use Permit will result in the immediate issuance of a Notice of Non-Compliance for violating the terms

and conditions of your Term Grazing Permit (Part 2, Section 8a). A Notice of Non-Compliance may result in Term Grazing Permit suspension or cancellation proceedings.

XIV. PERMITTEE REVIEW

On March 11, 2020; Cherie Owens met producer Tom and Tamra Kelly to develop and discuss the 2020 Summer Annual Operating Instructions for the Dog Knobs and Elk Springs Allotments. The manager has reviewed and agreed with these instructions.

If you have any questions or concerns, Rangeland Management Specialist Cherie Owens at (928) 635-5621 or cherie.owens@usda.gov.

Sincerely,

/s/Debra Mollet
