Forage

Four Bar Pasture

- Key Area: NO-C3
 - o Area dominated by BOHI with BOCU, Threawn, Wolftail and very few BOGR

Production by Species		
Species	Green Weight (lbs./acre)	Dry Weight (lbs./acre)
BOHI	675.0	284.0
Threawn	130.0	55.0
BOCU	135.0	57.0
Wolftail	0.0	0.0
BOCU	0.0	0.0
Total Production	940.0	394.0

- Key Area: NO-C5
 - o Is less than a mile West of NO-C3 and remains in the same soil type so no measurements were taken.
 - o There is a minimal difference in the two key areas, NO-C5 is dominated by BOHI but has a slight increase in BOCU, possibly enough to be captured in a production clipping but it would come to about 10-30 lbs/acre.
