**NOTICE OF PROPOSED DECISION (NOPD)  
PROPOSED ARIZONA STRIP FIELD OFFICE WATER DEVELOPMENT  
PROJECTS DECISION**

*This decision only applies to the project proposed within the Flat Top Well Allotment.*

**Authorize the following Range Improvement Project for construction within the Flat Top Well Allotment. (Refer to Project Map attached to this Proposed Decision.)**

The Flat Top Well proposed pipeline extension will extend off the existing Hurricane Rim pipeline at T. 39. N., R. 08 W., sec. 02, where it will extend south along an existing road for approximately two miles where a new water trough will be placed. The pipeline and trough will be located on BLM-administered land within T. 39 N., R. 08 W., sec. 15. This water will be available for wildlife yearlong.

**Range Improvement Projects within the Flat Top Well Allotment will be Subject to the Following Project Standards:**

Pipeline and Trough: The construction of the pipeline will use up to 2" high density polyethylene pipe buried 18" to 24" deep using a ripper tooth attached to a bulldozer. The pipeline will be installed by driving a crawler tractor with the ripper tooth attached and lowered into the ground across the route of the pipeline, then back to the start. This will loosen the soil and allow for the pipe to be more easily installed as the tractor makes its third pass along the line. The pipeline will be installed along a 15 foot wide path. A trough will be placed at the termination of the pipeline and will be constructed using heavy equipment sized tires and secured at the location using concrete. Wildlife escape ramps will be secured in the trough before it is filled. No new structures will be placed around this trough.

The Proposed Action includes future maintenance activities for the life of the project, which is expected to be at least 20-50 years. The exact maintenance requirements are not known but are

expected to include annual inspections using ATVs or pick-up trucks along the route for minor repairs to the pipeline which includes digging to find and repair leaks or clogs in the pipe. No onsite camping by the construction crew will be necessary.

**The Range Improvement Project will be Subject to the Following Best Management Practices:**

The range improvement project will be subject to the following best management practices (BMPs) in an effort to minimize the impacts of the project to social and natural environmental resources.

- Construction will be limited to daylight hours to minimize impacts to wildlife.
- Open trenches have the potential to trap and injure wildlife. During pipeline construction these risks will be mitigated by minimizing the length of time trenches are left open, providing escape avenues (lateral trenches) for wildlife when left overnight, and inspecting the trenches prior to backfill activities.
- Construction activities will be limited to periods when the soil and ground surface are not wet in order to avoid soil compaction.
- Construction activities will be conducted in a manner that will minimize disturbance to existing vegetation by limiting vegetation thinning and restricting construction activities to a 15 foot wide path.
- At no time will vehicle or equipment fluids (including motor oil and lubricants) be dumped on public lands. All accidental spills will be reported to the authorized officer and be cleaned up immediately, using best available practices and requirements of the law, and disposed of in an authorized disposal site. All spills of federally or state listed hazardous materials which exceed the reportable quantities will be promptly reported to the appropriate agency and the authorized officer.
- Vehicles and equipment will be power washed off-site before construction activities begin to minimize the risk of spreading noxious weeds. This will include cleaning all equipment before entering the Arizona Strip. The project area will be monitored for noxious weeds for two years following completion of the project.
- Soil disturbance associated with construction activities will be limited to the 15 foot wide project route.
- During construction vehicular traffic will be restricted to existing roads and along the 15 foot wide project route.
- The project site will be cleaned up at the end of each day the work is being conducted (e.g., trash removed, scrap materials picked up) to minimize the likelihood of condors visiting the site. BLM staff may conduct site visits to the area to ensure adequate clean-

up measures are taken.

- Any cultural (historic/prehistoric site or object) or paleontological resource (fossil remains of plants or animals) discovered in the project area will immediately be reported to the Arizona Strip Field Office Manager or her designee. All operations in the immediate area of the discovery shall be suspended until written authorization to proceed is issued. An evaluation of the discovery shall be made by a qualified archaeologist or paleontologist to determine appropriate actions to prevent the loss of significant cultural or scientifically important paleontological values.
- If in connection with this work any human remains, funerary objects, sacred objects, or objects of cultural patrimony as defined in the Native American Graves Protection and Repatriation Act (Public Law 101-601; 104 Stat. 3048; 25 U.S.C. 3001) are discovered, operations in the immediate area of the discovery will stop, the remains and objects will be protected, and the Arizona Strip Field Office Manager (or her designee) will be immediately notified. The immediate area of the discovery will be protected until notified by the Arizona Strip Field Office Manager (or her designee) that operations may resume.
- The work crew chief must notify the BLM wildlife team lead if California condors visit the worksite while construction is underway. Project activities will be modified or delayed where adverse effects to condors may result.
- If an active bird nest is located within the project area, the Arizona Strip Field Office Manager (or her designee) will be immediately notified in order to develop appropriate measures to avoid disturbance to the nesting birds.
- No hazing or harassment of wildlife is permitted.
- No smooth or barbed wire t-posts structures will be used to strengthen the integrity of the trough to keep it from moving. Instead, heavy equipment sized tires will be secured using concrete. This will facilitate ingress and egress of wildlife, particularly bat species.
- Wildlife escape ramps will be secured in the trough before it is filled.

## **Rationale**

The Flat Top Well Allotment is divided into two pastures and uses a deferred rotational grazing system. There are several earthen reservoirs on the allotment, but they are unreliable as they depend on rainfall events in order to fill, lack in water storage capabilities, and leak due to the soils' inability to retain water. Currently there is only one reliable water source in the West Pasture of the allotment, provided by a pipeline that extends from a BLM well near Colorado City.

The purpose of the project is not to increase permitted use, or animal unit months, but to encourage and achieve better livestock distribution within the allotment. The project will create a new water source in the southwestern part of the allotment which currently has no water. The addition of this water source would reduce impacts around the existing water trough on State Land and distribute livestock more evenly throughout the allotment. This would aid in maintaining the desired plant community objectives across this allotment.

The project will also provide an additional water source for wildlife, including pronghorn. Pronghorn rely heavily on the existing water sources in this allotment (the allotment is considered crucial range for pronghorn), so it is expected that the new water source would also benefit the pronghorn population. The *Arizona Statewide Pronghorn Management Plan* (AGFD 2009) identifies a number of management objectives, including objectives related to water availability. It should be noted that habitat management for non-listed, non-game species are typically provided in the form of supplemental benefits from actions designed to address other, targeted (i.e., threatened, endangered, candidate, or game species). These most often take the form of water developments or vegetative treatment projects. Thus, other wildlife species (along with pronghorn) will benefit from the water project by improving water distribution and improving habitat use by these species as well, which are also objectives contained within the Arizona Strip Field Office Resource Management Plan (RMP) (2008).

## **AUTHORITY**

- The authority for this decision is contained in part in Federal Land Policy and Management Act of 1976 (43 United States Code [USC] 1707 et seq.) and Title 43 of the Code of Federal Regulations (CFR), which state in pertinent parts:

### **§4100.0-8 Land Use Plans**

The authorized officer shall manage livestock grazing on public lands under the principle of multiple use and sustained yield, and in accordance with applicable land use plans. Land use plans shall establish allowable resource uses (either singly or in combination), related levels of production or use to be maintained, areas of use, and resource condition goals and objectives to be obtained. The plans also set forth program constraints and general management practices needed to achieve management objectives. Livestock grazing activities and management actions approved by the authorized officer shall be in conformance with the land use plan as defined at 43 CFR 1601.0-5(b).

### **§4120.3-1 Conditions for Range Improvements**

(a) Range improvements shall be installed, used, maintained, and/or modified on the public lands, or removed from these lands, in a manner consistent with multiple-use management.

(b) Prior to installing, using, maintaining, and/or modifying range improvements on the public lands, permittees or lessees shall have entered into a cooperative range improvement agreement with the Bureau of Land Management or must have an approved range improvement permit.

(c) The authorized officer may require a permittee or lessee to maintain and/or modify range improvements on the public lands under §4130.3-2 of this title.

(d) The authorized officer may require a permittee or lessee to install range improvements on the public lands in an allotment with two or more permittees or lessees and/or to meet the terms and conditions of agreement.

(e) A range improvement permit or cooperative range improvement agreement does not convey to the permittee or cooperator any right, title, or interest in any lands or resources held by the United States.

(f) Proposed range improvement projects shall be reviewed in accordance with the requirements of the National Environmental Policy Act of 1969 (42 U.S.C. 4371 *et seq.*). The decision document following the environmental analysis shall be considered the proposed decision under subpart 4160 of this part.

### **§4160.1 Proposed Decisions**

(a) Proposed decisions shall be served on any affected applicant, permittee or lessee, and any agent and lien holder of record, who is affected by the proposed actions, terms or conditions, or modifications relating to applications, permits and agreements (including range improvement permits) or leases, by certified mail or personal delivery. Copies of proposed decisions shall also be sent to the interested public.

(b) Proposed decisions shall state the reasons for the action and shall reference the pertinent terms, conditions and the provisions of applicable regulations. As appropriate, decisions shall state the alleged violations of specific terms and conditions and provisions of these regulations alleged to have been violated, and shall state the amount due under §§4130.8 and 4150.3 and the action to be taken under §4170.1.

(c) The authorized officer may elect not to issue a proposed decision prior to a final decision where the authorized officer has made a determination in accordance with §4110.3-3(b) or §4150.2(d).

### **§4160.2 Protests**

Any applicant, permittee, lessee or other interested public may protest the proposed decision under §4160.1 of this title in person or in writing to the authorized officer within 15 days after receipt of such decision.

### **§4160.3 Final Decisions**

(a) In the absence of a protest, the proposed decision will become the final decision of the authorized officer without further notice unless otherwise provided in the proposed decision.

(b) Upon the timely filing of a protest, the authorized officer shall reconsider her/his proposed decision in light of the protestant's statement of reasons for protest and in light of other information pertinent to the case. At the conclusion to her/his review of the protest, the authorized officer shall serve her/his final decision on the protestant or her/his agent, or both, and the interested public.

(c) A period of 30 days following receipt of the final decision, or 30 days after the date the proposed decision becomes final as provided in paragraph (a) of this section, is provided for filing an appeal and petition for stay of the decision pending final determination on appeal. A decision will not be effective during the 30-day appeal period, except as provided in paragraph (f) of this section. See §§4.21 and 4.470 of this title for general provisions of the appeal and stay processes.

(d) When the Office of Hearings and Appeals stays a final decision of the authorized officer regarding an application for grazing authorization, an applicant who was granted grazing use in the preceding year may continue at that level of authorized grazing use during the time the decision is stayed, except where grazing use in the preceding year was authorized on a temporary basis under §4110.3-1(a). Where an applicant had no authorized grazing use during the previous year, or the application is for designated ephemeral or annual rangeland grazing use, the authorized grazing use shall be consistent with the decision pending the Office of Hearings and Appeals final determination on the appeal.

(e) When the Office of Hearings and Appeals stays a final decision of the authorized officer to change the authorized grazing use, the grazing use authorized to the permittee or lessee during the time that the decision is stayed shall not exceed the permittee's or lessee's authorized use in the last year during which any use was authorized.

(f) Notwithstanding the provisions of §4.21(a) of this title pertaining to the period during which a final decision will not be in effect, the authorized officer may provide that the final decision shall be effective upon issuance or on a date established in the decision and shall remain in effect pending the decision on appeal unless a stay is granted by the Office of Hearings and Appeals when the authorized officer has made a determination in accordance with §4110.3-3(b) or §4150.2(d). Nothing in this section shall affect the authority of the Director of the Office of Hearings and Appeals or the Interior Board of Land Appeals to place decisions in full force and effect as provided in §4.21(a)(1) of this title.

#### **§4160.4 Appeals**

Any person whose interest is adversely affected by a final decision of the authorized officer may appeal the decision for the purpose of a hearing before an administrative law judge by following the requirements set out in §4.470 of this title. As stated in that part, the appeal must be filed within 30 days after receipt of the final decision or within 30 days after the date the proposed decision becomes final as provided in §4160.3(a). Appeals and petitions for a stay of the decision shall be filed at the office of the authorized officer. The authorized officer shall promptly transmit the appeal and petition for stay and the accompanying administrative record to ensure their timely arrival at the Office of Hearings and Appeals.

### **§4180.1 Fundamentals of Rangeland Health**

The authorized officer shall take appropriate action under subparts 4110, 4120, 4130, and 4160 of this part as soon as practicable but not later than the start of the next grazing year upon determining that existing grazing management needs to be modified to ensure that the following conditions exist.

(a) Watersheds are in, or are making significant progress toward, properly functioning physical condition, including their upland, riparian-wetland, and aquatic components; soil and plant conditions support infiltration, soil moisture storage, and the release of water that are in balance with climate and landform and maintain or improve water quality, water quantity, and timing and duration of flow.

(b) Ecological processes, including the hydrologic cycle, nutrient cycle, and energy flow, are maintained, or there is significant progress toward their attainment, in order to support healthy biotic populations and communities.

(c) Water quality complies with State water quality standards and achieves, or is making significant progress toward achieving, established BLM management objectives such as meeting wildlife needs.

(d) Habitats are, or are making significant progress toward being, restored or maintained for Federal threatened and endangered species, Federal Proposed, Category 1 and 2 Federal candidate and other special status species.

### **§4180.2 Standards and Guidelines for Grazing Administration**

(c) The authorized officer shall take appropriate action as soon as practicable but not later than the start of the next grazing year upon determining that existing grazing management practices or levels of grazing use on public lands are significant factors in failing to achieve the standards and conform with the guidelines that are made effective under this section. Appropriate action means implementing actions pursuant to subparts 4110, 4120, 4130, and 4160 of this part that will result in significant progress toward fulfillment of the standards and significant progress toward conformance with the guidelines. Practices and activities subject to standards and guidelines include the development of grazing-related portions of activity plans, establishment of terms and conditions of permits, leases and other grazing authorizations, and range improvement activities such as vegetation manipulation, fence construction and development of water.

### **DECISION PROTEST AND APPEAL PROCEDURES**

In accordance with 43 CFR 4160.2, any applicant, permittee, lessee or other interested public may protest the Proposed Decision under 4160.1 of this title, in person or in writing to the authorized officer (Lorraine M. Christian, Field Manager, Arizona Strip Field Office, 345 East Riverside Drive, St. George, Utah 84790) within 15 days after receipt of such decision. The

protest, if filed, must clearly and concisely state the reason(s) as to why the Proposed Decision is in error.

In accordance with 43 CFR 4160.3 (b), should a timely protest be filed with the authorized officer, the authorized officer, at the conclusion to her review of the protest shall serve the Final Decision on the protestant and the interested public.

In the absence of a protest, the Proposed Decision shall constitute the Final Decision without further notice unless otherwise provided in the Proposed Decision in accordance with 43 CFR 4160.3(a).

In accordance with 43 CFR 4.470, 4160.3(c), and 4160.4, any person whose interest is adversely affected by a final decision of the authorized officer may appeal the decision for the purpose of a hearing before an administrative law judge. The appeal must be filed within 30 days after the date the proposed decision becomes final or 30 days after receipt of the final decision. In accordance with 43 CFR 4.470, the appeal shall state clearly and concisely the reason(s) why the appellant thinks the final decision of the authorized officer is wrong.

Pursuant to 43 CFR 4.471 and 4160.3(c), an appellant also may petition for a stay of the final decision pending appeal by filing a petition for stay along with the appeal within 30 days after the date the proposed decision becomes final or 30 days after receipt of the final decision.

The appeal and any petition for stay must be filed at the office of the authorized officer (Lorraine M. Christian, Field Manager, Arizona Strip Field Office, 345 East Riverside Drive, St. George, Utah 84790). Within 15 days of filing the appeal and any petition for stay, the appellant also must serve a copy of the appeal and any petition for stay on any person named in the decision and listed at the end of the decision, and on the Office of the Field Solicitor located at U.S. Department of the Interior, Sandra Day O' Connor U.S. Courthouse, 401 West Washington Street, SPC 44, Suite 404, Phoenix, Arizona 85003-2151. Pursuant to 43 CFR 4.471(c), a petition for stay, if filed, must show sufficient justification based on the following standards:

- (1) The relative harm to the parties if the stay is granted or denied;
- (2) The likelihood of the appellant's success on the merits;
- (3) The likelihood of immediate and irreparable harm if the stay is not granted; and,
- (4) Whether the public interest favors granting the stay.

43 CFR 4.471(d) provides that the appellant requesting a stay bears the burden of proof to demonstrate that a stay should be granted.

Any person named in the decision from which an appeal is taken (other than the appellant) who wishes to file a response to the petition for a stay may file with the Hearings Division in Salt Lake City, Utah, a motion to intervene in the appeal, together with the response, within 10 days after receiving the petition. Within 15 days after filing the motion to intervene and response, the person must serve copies on the appellant, the Office of the Solicitor and any other person named in the decision (43 CFR 4.472(b)).

At the conclusion of any document that a party must serve, the party or its representative must sign a written statement certifying that service has been or will be made in accordance with the applicable rules and specifying the date and manner of such service (43 CFR 4.422(c)(2)).

**AUTHORIZED OFFICER’S SIGNATURE:**

The decision is consistent with 43 CFR 4100 and 43 CFR 4180 and the Standards and Guidelines for Healthy Rangelands.
