INSTALLATION OF TEMPORARY CORRAL WITHIN THE GILA BOX NATIONAL RIPARIAN CONSERVATION AREA

1....

DOI-BLM-AZ-G010-2023-009-CX

DECISION

Based on a review of the project described in the attached Categorical Exclusion (CX) documentation and Safford Field Office (SFO), Bureau of Land Management (BLM) staff recommendations, I have determined that the project is in conformance with the Safford District Resource Management Plan (RMP), as amended. The CX is based on site-specific resource analysis disclosed within Safford District Resource Management Plan 1992, 1994 (RMP) as approved in 1992 and amended in 1994. This CX specifically addresses installation of a 30-day, temporary corral to remove livestock within Bonita Creek of the Gila Box Riparian National Conservation Area. It is the Decision of the Safford Field Office to approve the application submitted by Menges Ranches LLC.

A BLM Notice to Proceed (NTP) letter will be issued to the applicant with stipulations. The issuance of the NTP is consistent with the SFO RMP as amended. The NTP would be issued separate from this decision to the applicant.

ADMINISTRATIVE REVIEW OR APPEAL OPPORTUNITIES

This decision may be appealed to the Interior Board of Land Appeals, Office of the Secretary, in accordance with the regulations contained in 43 CFR, Part 4 and the attached Form 1842-1. If an appeal is taken, your notice of appeal must be filed at the: Safford Field Office, 711 14th Ave, Safford AZ 85546, within 30 days from receipt of this decision.

The appellant has the burden of showing that the decision appealed from is in error. In accordance with 43 CFR 2931.8 (b) this decision remains in effect pending appeal unless a stay is granted. If you wish to file a petition (pursuant to regulation 43 CFR 4.21 (58 FR 4939, January 19, 1993) (request) for a stay (suspension) of the effectiveness of this decision during the time that your appeal is being reviewed by the Board, the petition for a stay must accompany your notice of appeal. A petition for a stay is required to show sufficient justification based on the standards listed below. Copies of the notice of appeal and petition for a stay must also be submitted to each party named in this decision and to the Interior Board of Land Appeals and to the:

Office of the Solicitor Department of the Interior Office of the Field Solicitor Sandra Day O'Connor U.S. Court House #404 401 West Washington Street SPC44, Phoenix, AZ 85003-2151

(See 43 CFR 4.413) at the same time the original documents are filed with this office. If you request a stay; you have the burden of proof to demonstrate that a stay should be granted. Except as otherwise provided by law or other pertinent regulation, a petition for a stay of a decision pending appeal shall show sufficient justification based on the following:

Standards for Obtaining a Stay

1.

2.

1. The relative harm to the parties if the stay is granted or denied,

2. The likelihood of the appellant's success on the merits,

- 3. The likelihood of immediate and irreparable harm if the stay is not granted, and
- 4. Whether the public interest favors granting the stay.

INTRODUCTION

Office: Safford Field Office, Bureau of Land Management (BLM)

Lease/Serial/Case File No: Johnny Creek Allotment No. 46150

Applicant: Menges Ranches LLC

Location of Proposed Action: -109.541649, 32,975653

Description of Proposed Action: The project location is approximately 11.1 miles north of San Jose, Arizona within the Gila Box Riparian National Conservation Area (GBRNCA) outside of the Johnny Creek Allotnent. The proposed action is to install a temporary panel corral on the bank of Bonita Creek. The portable corral will be positioned on the west side, away from the flowing channel, near the edge of Red Knolls Road for 30 days. This project will reduce hazards to people and livestock while facilitating the permittee in removing livestock from the GBRNCA. The GBRNCA Plan excluded livestock from riparian areas.

The Bonita Creek floodplain channel is a mixed landscape consisting of boggy, rocky, heavily vegetated, and steep terrain. Livestock can easily avoid capture in this terrain by quickly evading and out maneuver people riding horses. Unhandled or spoiled livestock avoid capture by staying the channel and when they feel threatened, can show dangerous aggression towards those trying to relocate or capture them. The temporary corral location on the floodplain is necessary to facilitate capture due to the livestock's aversion to being relocated into the uplands and desire to remain in the channel. Livestock that can be herded will be pushed into the uplands out of the riparian area. By looking at the amount of sign and sightings, only a couple of big unbranded buils are expected to be in the area.

The footprint of this project will be approximately 100 feet by 100 feet, and contain several metal panels, gates and two wing extensions off the main corral. This corral is comprised of free standing, portable metal panels and gates. The metal panel wing extensions will attach to the main corral and act as a funnel to guide livestock into the corral entrance gate. The first extension will reach from the west canyon wall to the corral and the second will extend easterly away from the corral, each extension will each span approximately 30 feet. There will not be any posts or ground securement needed to install the corral or wing extensions. The corral entrance gate is manufactured with a locking mechanism which allows livestock to enter and not exit the corral.

Livestock will be baited into the corral with a salt block and a molasses-based protein tub. The salt will be in the form of a portable, 11-inches by 9-inch hard block. The protein tub is portable, plastic tub measuring approximately 24-inches tall and 36-inches in diameter and contains a mostly solid mixture of minerals, vitamins, cooked grain meal protein and molasses. A small

Categorical Exclusion Record Page 1

trough will be placed within the corral to provide water to the captured livestock.

The trough shall have a wildlife escape ramp installed. The corral entrance gate will be fashioned in a manner to provide an exit gap for larger wildlife. The 6-foot-tall metal panels have approximately 12-inches of space from the bottom rung to level ground. With the corral being placed on uneven sand, some under panel spaces will be larger than 12-inches further facilitating larger wildlife movement.

Due to the target livestock being influenced or pushed away from the temporary corral area by the presence of people, every second day the permittee will inspect the corral entrance gate, ensure there is water in the trough and for captured livestock. Captured livestock will be removed at the time of inspection. Access to the corral from the Red Knolls Road is possible through the use of an existing two track road. Access is necessary for a tow vehicle and trailer to reach the corral to permit the captured livestock to be loaded on a trailer and to remove the corral. Vehicles will not be authorized to be driven off Red Knolls Road at any other time. See Appendix A for attached maps.

LAND USE PLAN CONFORMANCE

Land Use Plan (LUP) Name: Safford District Resource Management Plan 1992, 1994 (RMP) asamended

Date Approved/Amended: 1992, 1994

The proposed action is in conformance with the applicable LUP because it is either specifically provided for, or it is clearly consistent with, the following LUP decision(s):

GM100- BLM policy requires the use of protective measures during implementation of its rangeland programs to reduce or eliminate adverse environmental impacts and enhance resources.

The following measures apply to developments built in the Environmental Impact Statement area and are common to all alternatives. 1. An interdisciplinary team of resource specialists will review all rangeland development proposals to ensure the greatest multiple use benefits. 2. All proposals will be evaluated in an environmental study of appropriate scope to determine sitespecific impacts. The proposed action has been reviewed for conformance with these plans [43 CFR 1610.5, BLM MS 1601.04(C)(2)].

COMPLIANCE WITH NEPA

The Proposed Action is categorically excluded from further documentation under the National Environmental Policy Act (NEPA) in accordance with:

> 516 DM 11.9, D. Range Management (2) Placement and use of temporary (not to exceed one month) portable corrals and water troughs, providing no new road construction is needed.

This categorical exclusion is appropriate in this situation because there are no extraordinary circumstances potentially having effects that may significantly affect the environment. The proposed action has been reviewed, and none of the extraordinary circumstances described in 43 CFR Part 46.215 apply.

ATTACHMENT: EXTRAORDINARY CIRCUMSTANCES WORKSHEET

The action has been reviewed to determine if any of the extraordinary circumstances (43 CFR 46.215) apply.

The a 46.21	ction ha	as been reviewed to determine if any of the extraordinary circumsta:)) apply. The project would:	nces (43 CFR
(a) Have significant impacts on public health or safety.			
Yes	No X	Rationale: No significant impacts on public health or safety due to the scope, scale and type of action being proposed. The permittee is skilled at handling livestock and the type of activity proposed is a regular occurrence on public lands related to safe capture, handling and removal of livestock on rangelands.	AFM Initials AT
(b) H sole	lave sig or princ	mificant effects on such unique geographic characteristics as prime cipal drinking water aquifers; wetlands (EO 11990); or floodplains (farmlands; EO 11988).
Yes	NoX	Rationale: No. The proposed action will occur within the Bonita Creek floodplain; however, it will have insignificant effects on the floodplain and associated wetlands in Bonita Creek. Alternatives to the proposed action were considered and determined to be meffectual for the purpose. Large, non-native ungulates such as cattle are known to have significant detrimental effects on riparian/wetland ecosystems including, but not limited to, compaction of soils and destabilization of stream banks caused by trampling, loss of vegetation caused by high levels of herbivory of stabilizing herbaceous riparian vegetation and sapling/young woody riparian vegetation, and effects to water quality due to animal wastes. The proposed action, the installation of a temporary panel cortal for removal of cattle from the Gila Box Riparian National Conservation Area, is in conformance with E.O. 11990 in that it serves to minimize the destruction, loss and degradation of wetlands caused by the animals, and the removal of the animals supports preservation of the natural and beneficial values of these wetlands. Removing these animals through this action is also in conformance with E.O. 11988 as it will enable the natural systems to restore and preserve the natural and beneficial values served by floodplains. FEMA has identified Bonita Creek in the National Flood Hazard Layer as a Zone A, Special Flood Hazard Area, from its confluence with the Gila River to the end of FEMA's survey area, approximately 1 mile downstream from the project area. It is likely that FEMA will determine that the project area is also in Zone A if the entirety of Bonita Creek is	Hydrologist Initials MS

V Table 2 Extraordinary Circumstanass Workshoot

		surveyed. As such, considerations concerning timing of				
	deployment should be made to account for periods of high run off derived from seasonal precipitation or snowmelt. Because					
		ground disturbance will be minimal and because the temporary				
		project has a short 30-day duration, no effects to surface water				
		flows or increases in erosion are expected. Removing cattle may				
	have subtle replenishment benefits for aquifers due to increases					
		in infiltration as the natural system restores. There are no NRCS				
		identified prime farmlands within the project area.				
(b) Ha	ve sign	ificant effects on such natural resources and unique geographic cha	racteristics as			
park, r	ecreatio	on or refuge lands; national natural landmarks; national monuments	: wilderness			
areas;	wild or	scenic rivers; or other ecologically significant or critical areas.	,			
Yes	No	Rationale: The project is located within the Gila Box NCA;	Outdoor			
	Х	however, the scope and scale of the project are not anticipated to	Recreation			
		have any significant effects on the unique geographic	Initials			
		characteristics of these lands. The project is temporary, does not	RL			
		involve additional development or disturbance to the area. The				
		project as proposed removes a potential resource threat to the				
		resource values recognized within the area.				
(b) Hav	ve sign	ificant effects on such unique geographic characteristics as historic	or cultural			
resourc						
(g) Hay	ve sign	ificant impacts on properties listed, or eligible for listing, on the Na	tional			
Registe	r of H	istoric Places as determined by either the bureau or office.				
(1) V10	late a H	ederal law, or a State, local, or tribal law or requirement imposed for	or the			
-		the environment.				
(K) Lin	nt acce	ess to and ceremonial use of Indian sacred sites on Federal lands by	Indian			
rengiou	rac	titioners or significantly adversely affect the physical integrity of su	ich sacred			
sites (E			~			
Yes	No X	Rationale: No. There would be no significant ground	Cultural			
	л	disturbance as the structure is free-standing without need to	Resources			
		construct footings nor anchor it down. There are no properties	Initials			
		listed, or eligible for listing, on the National Register of Historic	GM			
		Places in within the project locations. This action will not				
		violate any Federal, State or Tribal laws or requirements to protect the environment. No known sacred sites are within the				
		project areas. This action would not preclude access by any				
		group to access ceremonial or sacred sites on Federal lands or				
1		adversely impact the integrity of such sacred sites.				
(b) Hav	e signi	ficant impacts on migratory birds, or other ecologically significant	or critical			
areas.		include on indicatory onds, or other coologicany significant	or critical			
	e signi	ficant impacts on species listed, or proposed to be listed, on the Lis	tof			
Endang	ered of	r Threatened Species, or have significant effects on designated Critic	ical Habitat			
for thes	e speci	los.	ivai mavitat			
			······································			

:

•.•

Yes	No	Rationale: No. Ground disturbance is not likely to be	Wildlife			
	X	significant during the short 30-day duration of the project and	Biologist			
		therefore, no significant impacts to migratory birds, or other	Initials			
		ecologically significant or critical areas. In the Gila Box	KF			
		Riparian National Conservation Area (GBRNCA), which is				
		where the project is located, a large complex exclosure was				
		installed to help prevent livestock from entering the riparian				
		areas of the GBRNCA. According to the SFO Biological				
		Opinion (BO) for the Gila District Grazing Program (22410-				
		2006-F-0414), BLM created a conservation measure to remove]			
		unauthorized livestock from areas excluded or closed to grazing.	ĺ			
		The proposed action would help alleviate grazing compliance				
		issues by removing livestock from the GBRNCA riparian				
		habitat area. The concern associated with the trough in the				
	corrals has been mitigated by installing an escape ramp in the					
·		temporary trough. The impacts associated with livestock in				
		confined areas for long durations has been mitigated by the				
		permittee checking the corral every two days and removing any				
		livestock at that time. Per review of the most current SFO GIS				
		data, there is Critical Habitat for the yellow-billed cuckoo				
		(<i>Coccyzus americanus</i>) in the project footprint. With the	2			
		proposed action occurring on the floodplain along with minimal				
		ground disturbance and no vegetation removal, with the				
		exception of grasses, forbs and small shrubs that may be				
		consumed or trampled by the captured livestock, there will be				
		no negative impact on this species critical habitat or				
		populations. Therefore, there would be "no effect" to				
		Threatened or Endangered Species or Critical Habitat from the				
	ļ	Proposed Action.				
(c) Ha	ve high	ly controversial environmental effects or involve unresolved confli	cts			
concer	ning al	ternative uses of available resources [NEPA section 102 (2) (E)].				
Yes	No	Rationale: No, the proposed action as proposed does not	AFM			
	X	involve unresolved conflicts concerning alternative uses of	Initials			
		available resources. The action is authorized and acknowledged	AT			
		as a use of public lands through the Federal grazing regulations				
		and the Council on Environmental Quality (CEQ) has				
		determined the scope and scale of the project type to be				
		excluded from additional NEPA analysis. The permittee is skilled at handling livestock and the type of activity means addited in the second se				
		skilled at handling livestock and the type of activity proposed is a regular occurrence on public lands related to safe capture,				
		handling and removal of livestock on rangelands that stray				
		between natural and manmade boundaries.				
(d) Ha	ve high	ly uncertain and potentially significant environmental effects or inv	olve unique			
or unk	nown e	nvironmental risks.	orve unique			

3

۰.

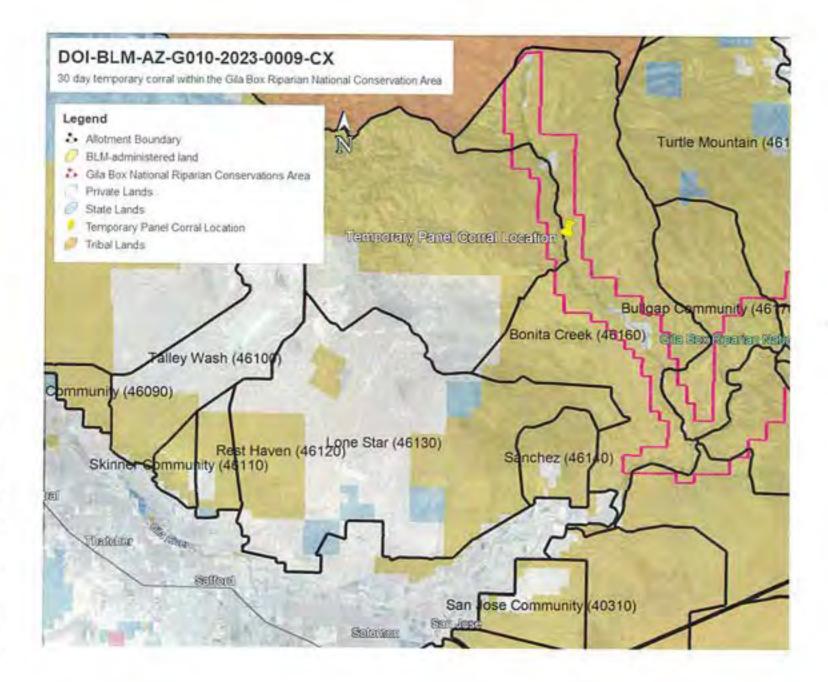

Yes	No	Rationale: No. The proposed action or its activities would not	Project Lead
	X	cause any conflicts or highly controversial environmental	Initials
		effects or involve unresolved conflicts concerning alternative	RD
		uses of resources, because the project is temporary, does not	
		involve additional development or disturbance to the area. The	
		project as proposed removes a potential resource threat to the	
		resource values recognized within the area.	
(e) Es	tablish	a precedent for future action or represent a decision in principle abo	ut future
		potentially significant environmental effects.	
Yes	No	Rationale: No, as stated above the proposed action type is both	AFM
	X	a regular and long-standing use of public lands clearly	Initials
		acknowledged within the BLM grazing regulations as well as	AT
		standard practice among livestock owners. The use of	
		temporary facilities of this scope and scale on public lands has	
		also been determined by CEQ to be applicable for the exclusion	
		of additional NEPA analysis. Therefore, as proposed, the project	
		is not anticipated to set a future precedent or represent a	
		decision regarding future actions with potentially significant	
		environmental effects.	
(f) Ha	ve a dir	ect relationship to other actions with individually insignificant but	umulativalv
signifi	icant en	vironmental effects.	Sumulatively
Yes	No	Rationale: No. The proposed action would not have a direct	Project Lead
	x	relationship to other actions with individually insignificant but	Initials
		cumulatively significant environmental effects. The direct	RD
		relationship to other actions this project has with individually	КD
		insignificant effects do not rise to cumulatively significant	
		because of the limited size and scope of the previous, potential	
		future actions, and this proposed action. When looked at	
		together, these projects would not impact any resources to a	
		level where additional review would be required. Some past and	
		reasonably foreseeable future actions connected to this proposal	
		all share the same general area but are analyzing different action	
		impacts. The effects of this project type can be generally	
		predicted based on generally known effects of similar project	
		types completed in the area.	
(i) Hay	ve a disi	proportionately high and adverse effect on low income or minority	nomulations
(Exect	itive Or	der 12898).	populations
Yes	No	Rationale: No. The proposed action does not have a	D & EQ
1.00	X		P&ES
		disproportionately high and adverse effect on low income or minority populations (Executive Order 12808). The project is	Initials
		minority populations (Executive Order 12898). The project is	DC
		proposed as temporary (less than 30 days), and the proposed	
		action will ensure the project as applied for is in conformance	
		with federal regulation and policy. Several communities within	
		the project area fall within consideration to be environmental	
		justice communities, however, no additional project	
	1 1	development or disturbance is proposed for this project.	

*

(1) Contribute to the introduction, continued existence, or spread of noxious weeds or non-				
native invasive species known to occur in the area or actions that may promote the				
introdu	introduction, growth, or expansion of the range of such species (Federal Noxious Weed			
Contro	l Act a	nd Executive Order 13112).		
Yes	No	Rationale: No. There are no known noxious weeds at this site	NR Initials	
	Х	and the applicant is required to prevent any introduction of seed	MM	
		associated with the proposed action. The applicant will not be		
		creating any significant ground disturbance through the		
		temporary installation of the portable corral. The applicant will		
		follow BLM handbook "H-1740-2 Integrated Vegetation		
		Management Handbook" Best Management Practices, including		
		cleaning all equipment (thorough removal of soil and plant		
	parts) before entering public land. The applicant will not be			
		transporting any vegetative materials or wood products. The		
		BLM will conduct follow-up monitoring for noxious and non-		
		native weeds after the corral has been disassembled, as there is		
		potential for cattle to introduce and disperse non-native		
		vegetative material and cause infestations.
