No

NEED STATEMENT/PROBLEM ANALYSIS:

The plant community in the area is primarily pinon/juniper woodland. Through the years junipers have invaded the area and are currently on need of removal to reestablish grassland areas that historically occurred in the area. Removal of junipers would be accomplished through the use of an agra-axe. After removal and drying, the treated juniper slash would need to be burned to enhance the production of grasses and forbs. The area is popular among elk, turkey and mule deer hunters.

PROJECT OBJECTIVES:

The primary objective of this project is to enhance grassland habitat through the use of an agra-axe to remove junipers. Habitat enhancement would occur through the removal of junipers and subsequent burning to expand the grassland/woodland edge effect. The area is accessible from Forest Road 200.

This project will dovetail nicely with several other projects in the area. The Roscoe grassland maintenance project was completed in 2004; the Bar X tank renovation project was completed in 2005 and the dry creek grassland maintenance project is scheduled to be completed in 2007. There is also a burn and another grassland maintenance project that are scheduled to be submitted this year. These projects will act together to benefit elk, deer and other wildlife on a large piece of landscape in unit 23.

PROJECT STRATEGIES:

Use an agra-axe to remove junipers on approximately 500 acres of historic grassland.

PROJECT LOCATION:

T 10N, R 14E, Sections 29, 31 & 32

LAND OWNERSHIP AT PROJECT SITE (Please state specifically if PRIVATE PROPERTY and provide landowner's name):

The land is managed by the United States Forest Service, Tonto National Forest, and Pleasant Valley Ranger District.

IF PRIVATE PROPERTY, IS THERE A STEWARDSHIP AGREEMENT BETWEEN THE LANDOWNER AND THE DEPARTMENT?

HABITAT DESCRIPTION:

The plant community in the area is primarily grassland and pinon/juniper woodland at an average elevation of 5500 feet above sea level. Species include various grasses, alligator, pinion pine, and oak brush. The diversity of plant species would increase after treatment with more grasses, shrubs and forbs.
