

Decision Memo

Southeast Pipeline on the Lyons Fork Allotment

USDA Forest Service
Tonto National Forest
Globe Ranger District
Gila County, Arizona

The Southeast pipeline project on Globe Ranger District is located on the Lyons Fork allotment, near Forest Road 248, approximately 12 air miles south of Globe, Arizona. The legal location of the project is Township 2 South, Range 14 East, Section 15. (See project map in Appendix A).

Project Background

The Lyons Fork allotment is authorized/permitted to graze livestock using a rest-rotation system. However, water sources are not currently adequate or available where they are needed to fully implement this grazing strategy. With the current dry conditions, earthen stock tanks and seasonal springs have dried up, causing uneven grazing patterns. Specifically, in Bobtail pasture, only one tank is available for livestock to drink. This does not allow for livestock to disperse across the rest of the pasture, causing high grazing pressure in the area near the tank while available forage across the rest of the pasture goes unutilized.

Project Purpose

Currently, Lyons Fork allotment range improvements are not adequate to implement a proper rotational strategy. Cattle are not able to disperse across the pastures, causing uneven use. This project will allow for better livestock distribution which will in turn maintain or improve forest resources in compliance with the current 1985 Tonto National Forest Plan.

Specifically, on the Lyons Fork allotment, we need to supply additional water for livestock in Bobtail pasture to enhance livestock distribution.

Decision

Management of livestock on the forest is an active and adaptive process using various grazing strategies in which cattle are moved throughout the allotment to use pastures where forage is available and to allow other pastures to rest. To allow for more even use of occupied pastures, the forest can move water to areas of a pasture if water is not already available to livestock within a reasonable distance, particularly during times of drought, when natural water sources may be scarce. The forest uses the current grazing authorization and other administrative tools from law, regulation, and policy for authorizing projects for range management and resource protection during drought. (FSH 2209.13, 19.1)

On the Lyons Fork allotment, I have decided to supply additional water sources that are needed in Bobtail pasture. This water will better distribute livestock and offset dry springs and earthen tanks. Specifically, I have decided to extend an above ground poly pipeline from an existing Storage Tank being fed off of non-Forest Service land.

This pipeline will run above ground on the west side of Forest Service Road 248 for about one-half mile. Just past the pasture fence, the pipeline will be buried, using heavy equipment, across the road surface to the east side of the road where a new storage tank and trough will be placed.

The storage tank and trough location may need to have minimal vegetation cleared with equipment to place the improvements. This improvement is accessible by Forest Service Road 248 and no temporary routes will be necessary. Once the water development is installed, it will become a maintenance responsibility of the term grazing permit holder.

Design Features

This project will comply with applicable Best Management Practices and the following design features to minimize or eliminate effects to other resources:

- Pipeline will be buried at least 18 inches below ground where it crosses Forest Service Road 248.
- Pipeline will be at minimum one inch in diameter.
- All troughs should be equipped with a wildlife escape and access ramps from which wildlife can escape or drink from the trough. All escape ramps will be built of expanded metal or similar materials and extend to bottom of trough and sides. Ramp will be firmly secured to trough rim so it will not be knocked loose by animals. Access ramps will be constructed of durable material such as concrete or metal. Slope will not exceed 45 degrees. Further design specifications may be required from “Water for Wildlife” by Taylor and Tuttle 2007.
- Water troughs will be kept at heights that make them useable to livestock.
- For metal troughs, bottoms of troughs should be kept clear of the ground, when possible, with at least 2” to 4” of clearance under the bottom of the trough to prevent rusting or decomposition.
- Water from overflow pipe must be directed away from trough area.
- Storage tanks will be close topped.
- All above ground pipeline supported structures will be maintained to keep pipe at gradient and prevent sagging. Support structures should be utilized for entire above ground pipeline.
- Poles, posts, and trough framing materials used in water development construction will be maintained, repaired, or replaced as needed. Materials must not be taller than the trough and wires should not be placed over trough to allow for watering avian species.
- Pipelines with air and drain valves will be covered with fine screen to prevent rodents and dirt from entering pipeline.

Reasons for Categorically Excluding the Proposed Actions

My assessment is that this proposal falls within the categories of actions listed in the Forest Service National Environmental Policy Act Handbook (FSH) that are excluded from documentation in an Environmental Assessment or Environmental Impact Statement. This category is found in 36 CFR 36.2 (9). This category of the action is applicable because this allotment has been added to the Recissions schedule and an allotment analysis is expected in the future.

I have determined that there are no extraordinary circumstances associated with this project that would preclude the use of this category. This determination is based on the absence or the negligible level of adverse effects on the following resource conditions:

- a. Federally listed threatened or endangered species or designated critical habitat, species proposed for Federal listing or proposed critical habitat, or Forest Service sensitive**

- species** – A biological evaluation was completed March 9, 2021, which determined none of these resources are located within the project area. No further discussion is warranted.
- b. Flood plains, wetlands, or municipal watersheds** – None of these resources are located within the project area. No further discussion is warranted.
 - c. Congressionally designated areas such as wilderness, wilderness study areas, or national recreation areas** – None of these resources are located within the project area. No further discussion is warranted.
 - d. Inventoried roadless areas or potential wilderness areas** –None of these resources are located within the project area. No further discussion is warranted.
 - e. Research natural areas** – None of these resources are located within the project area. No further discussion is warranted.
 - f. American Indian religious or cultural sites; and archaeological sites, or historic properties or areas** – The project area was surveyed for these resources in 2021, and the Forest Archaeologist has determined there will be no effects from this project.

Public Involvement

On January 11, 2022, a scoping letter was mailed out to 19 individuals and organizations outlining the proposed action. One responsive comment letter was received from Western Watersheds Project. The commenter is concerned with whether livestock grazing should be authorized on the allotment under current conditions and includes factors that the forest should consider when making that determination. This project does not address authorization of the allotment¹; it only addresses the provision of water to address movement of permitted cattle in compliance with the current authorization. This project does not change the maintenance level or status of any Forest Service system roads.

Findings Required by Other Laws and Regulations

This decision is consistent with the Tonto National Forest Land Management Plan. The project was designed in conformance with the Forest Plan and other federal and state law, policy, and direction applicable to the resources present in the Tonto National Forest. *The National Forest Management Act of 1976 (Public Law 104-33, as amended)* requires the U.S. Forest Service to provide for biological diversity on National Forest Service lands consistent with overall multiple-use objectives and to maintain viable wildlife populations in the planning area. The Forest Plan provides planning components that this decision complies with, including standards and guidelines.

Implementation Date

This project is not subject to administrative review and can be implemented immediately as detailed in this decision.

¹ This allotment is on the Recissions Schedule for future analysis at which time the forest will consider these and other factors to determine if livestock grazing should be reauthorized.

Contact

For additional information concerning this decision, contact: A. Jamie Wages, Rangeland Management Staff, Globe Ranger District, 7680 South Sixshooter Canyon Globe, Arizona 85501, 480-291-4500.

Date

In accordance with Federal civil rights law and U.S. Department of Agriculture (USDA) civil rights regulations and policies, the USDA, its Agencies, offices, and employees, and institutions participating in or administering USDA programs are prohibited from discriminating based on race, color, national origin, religion, sex, gender identity (including gender expression), sexual orientation, disability, age, marital status, family/parental status, income derived from a public assistance program, political beliefs, or reprisal or retaliation for prior civil rights activity, in any program or activity conducted or funded by USDA (not all bases apply to all programs). Remedies and complaint filing deadlines vary by program or incident.

Persons with disabilities who require alternative means of communication for program information (e.g., Braille, large print, audiotope, American Sign Language, etc.) should contact the responsible Agency or USDA's TARGET Center at (202) 720-2600 (voice and TTY) or contact USDA through the Federal Relay Service at (800) 877-8339. Additionally, program information may be made available in languages other than English.

To file a program discrimination complaint, complete the USDA Program Discrimination Complaint Form, AD-3027, found online at http://www.ascr.usda.gov/complaint_filing_cust.html and at any USDA office or write a letter addressed to USDA and provide in the letter all of the information requested in the form. To request a copy of the complaint form, call (866) 632-9992. Submit your completed form or letter to USDA by: (1) mail: U.S. Department of Agriculture, Office of the Assistant Secretary for Civil Rights, 1400 Independence Avenue, SW, Washington, D.C. 20250-9410; (2) fax: (202) 690-7442; or (3) email: program.intake@usda.gov.

USDA is an equal opportunity provider, employer, and lender.
