J Bar B Cattle Co. LLP
Poison Springs Allotment
3245 E. Desert Lane, Route 1
Phoenix, AZ 85042

Dear John:

The following are your 2024 annual operating instructions (AOI) for the Poison Springs grazing allotment. These instructions have been developed from collaboration with you and in consideration of Forest Service Handbook 2209.13, Tonto National Forest Plan, associated National Environmental Policy Act analysis, Allotment Management Plan, and available information describing range conditions.

Authorized Use

The following table describes authorized livestock numbers per grazing unit, anticipated use dates, and proposed monitoring dates. Please request a change in this schedule well in advance of the proposed dates. Please, maintain and submit records that indicate your compliance to permitted use.

Grazing Unit	Dates of Use	Tentative Monitoring Date	Authorized Livestock	Rationale/Comments
Bassett Lake	January 9 th February 29 th	March 11	115 Cows	
Intake	March 1 st April 31 st	May 8	115 Cows 10 Bulls	
Summit	May 1 st July 31 st	August 8	115 Cows 10 Bulls	
Klondyke	August 1 st September 30 th	September 8	115 Cows 10 Bulls	
Blevins	October 1 st Next AOI	Next AOI	115 Cows	

Monitoring:

Upland utilization is measured at the end of the growing season in key areas for key forage species. This information, along with vegetation condition, forage plant production and vigor,

soil and watershed condition, will be used to make informed management recommendations concerning pasture moves and stocking rates.

Riparian utilization in key reaches is measured during growing season to verify residual vegetation is present for streambank protection during flow events.

Grazing intensity will be evaluated during the growing season to make necessary changes needed for plant development and recovery.

Vegetative Use Guidelines:

Grazing will be managed so conservative use levels are achieved over the long-term in pasture key areas. It is your responsibility as permittee to take action so that livestock grazing does not exceed vegetative use thresholds. Please arrange for an allotment inspection if seasonal vegetative use of available forage approaches these thresholds.

Vegetation	Use Threshold
Upland herbaceous species	30-40% of current year's growth
Upland browse species	50% of current year's growth
Riparian herbaceous species	Limited to 40% of plant species biomass and maintain 6-8 inches of stubble height on deergrass
Riparian woody species	Limited to 50% of leaders browsed on upper 1/3 of plants up to 6 feet tall
Streambanks (if applicable)	Limited to less than 20% alteration of alterable streambanks
Mexican Spotted Owl PAC's (where applicable)	20% optimum-40% maximum
Annual Grasses	50% of current year's growth

Range Improvement Maintenance:

All range improvements must be maintained to Forest Service standards before cattle will be allowed to enter the units. You must receive verbal concurrence for each project before work can begin except routine maintenance (e.g. cleaning dirt tanks, maintaining fence, restoring pipe). It is your responsibility to be aware of and comply with fire restriction.

The following table describes 2023 proposed range improvement projects.

Pasture	Location	Description of Work	Clearances Needed
Klondyke	Old 188 Highway District Boundary	Install a cattleguard for increasing traffic	Need Archeological clearance.
Bassett Lake Summit	1491/ 188 Intersection Well	Reactivate well in Blevins. Install pipeline, storage and	Need Archeological, Hydrologic and Biological clearance prior to Decision.

		trough in Bassett Lake.	
Blevins	Blevins Well	Pump water up to a new storage tank and trough. Will flag route.	Need Archeological, Hydrologic and Biological clearance prior to Decision.
Blevins	Blevins Pasture	Propose pasture split at existing fence line.	Need Archeological and Biological clearance prior to Decision.
Intake	Last tank near Ead's Wash	Drill new well near last trough at Ead's Wash	Need Archeological and Biological clearance prior to Decision.
Summit	Summit/Klondyke Corral	Reactivate or drill new well at corral between Summit and Klondyke pastures.	

Salting:

In most cases, salt must be located no closer than ¼ mile from streams, rivers, riparian areas, trails, and known archaeological sites.

Supplements and Attractants

Protein blocks, nutritional supplement, and other attractant may be authorized.

Supplemental Feeding:

No supplemental feeding is authorized.

Weeds

Invasive plants threaten ecosystem health and grazing resources. Please assist us in preventing the introduction and spread of invasive plants.

If you have any questions, please contact Eric Hoskins, Rangeland Management Specialist, at (480) 435-5563.

Sincerely,

Jeremy Plain
District Ranger
