

Annual Operating Instructions

SOUTH ESCUDILLA ALLOTMENT

Alpine Ranger District
Apache-Sitgreaves National Forests

2023 Grazing Season

1. PASTURE USE SCHEDULE

I have approved your application to graze up to 64 head of cattle on the South Escudilla Allotment. The following table outlines the grazing rotation.

Pasture	On	Off	# Days	Comments
North Pasture	7/1	8/31	62	
South Pasture	9/1	9/30	30	
Northwest Pasture	7/15 or 9/10	8/7 9/30	21	Up to 50 head of the authorized cattle

The schedule & level of authorized use above is an estimate and may be modified at any time prior to or during the grazing season if utilization levels, identified below, are met, if water availability is inadequate, or for other resource management reasons.

2. UTILIZATION STANDARDS

The following utilization standards will be applied on the South Escudilla Allotment:

- 25% use, by weight of current year's growth, on upland perennial grass species.
- 25% use, by number of growing leaders, on upland browse species.
- 25% use, by weight of current year's growth, on riparian grass species.
- 25% use, by number of growing leader's, on riparian browse species.
- Within Northern goshawk territories, a utilization level in forested areas (includes small openings) of: 20% average by weight.

3. KEY AREA MONITORING

Livestock grazing utilization monitoring may be conducted in key areas near the midpoint or end of the grazing period, or at the end of the growing season for each pasture. It is the permittees responsibility to act so that livestock grazing does not exceed the allowable use guidelines. Proper salt placement (more than a ¼ mile from water, and away from roads), hauling water, and herding or riding are recommended. If the problem cannot be corrected with preventative measures, then early exits from the pastures, adjustments in the AMP, stocking levels, or other management or administrative actions may be necessary.

The purpose of utilization monitoring is to ensure that herbaceous vegetation is managed to provide suitable habitat and forage for various wildlife species, to meet physiological requirements for forage and browse plants, and promote or maintain proper range/watershed conditions.

District personnel may contact the permittees to coordinate site visits to monitor key areas, when practical. Permittee participation is encouraged. Forage utilization estimates will be consistent with the Forest Service Range Analysis Handbook methodology, and may also include FS Regional stubble-height standards, as well as other techniques generally accepted in the field of range management.

4. RANGE IMPROVEMENTS

Maintenance of range improvements: Permittees are responsible to maintain assigned range improvements within their allotment. This is in accordance with Part 3, clause 2 of the term grazing permit. If your neighbor is turning out before you on an adjacent pasture and the boundary fence is your responsibility, this fence must be repaired before your neighbor turns out. Routine maintenance of existing improvements does not require written clearance; however, construction or reconstruction of improvements must be authorized in writing from this office.

5. SPECIAL MANAGEMENT INSTRUCTIONS

Camping: As a Term Grazing Permit holder for the South Escudilla allotment, [REDACTED] and those employed by him are authorized vehicular access into the Hulsey Bench Wildlife Closure Area to properly manage the South Escudilla grazing allotment and adequately maintain the range improvements associated with the allotment. Activities outside of management of the allotment or the range improvements associated with the allotment are not allowed. This permit also authorizes the camp to exceed the 14 day camping stay limit each authorized grazing season at the Milk Corral (6/15 – 7/15 and 10/1 – 10/31), also within the Hulsey Wildlife Quiet Area, to accomplish the grazing management activities. **This section must be visible to Forest patrols.**

Livestock Distribution: Salting and maintaining improvements are good ways to achieve proper livestock distribution. Frequent riding may be necessary to break up concentrations of livestock. A full time rider may be needed to herd livestock onto lightly used areas, reducing grazing pressure on riparian areas and meadows.

Fire Prevention: All vehicles should be equipped with a properly functioning exhaust system. A shovel and axe for use in extinguishing camp and forest fires should be carried. All open camp and branding fires, when allowed, must have a fire ring down to the mineral soil, and be handled in a safe manner. All State and local fire regulations and restrictions will be observed. Report any fires to the Springerville Interagency Dispatch Center at **928-333-6360**.

We appreciate your cooperation in the management of the South Escudilla Allotment. If you have any questions regarding these instructions, please contact my Rangeland Management Staff or myself at (928) 339-5000.
