

Annual Operating Instructions

WILLIAMS VALLEY ALLOTMENT

Alpine Ranger District
Apache-Sitgreaves National Forests

2023 Grazing Season

1. PASTURE USE SCHEDULE

I have approved your application to graze up to 136 head of cattle on the Williams Valley Allotment. The following table outlines the grazing rotation:

Pasture	On	Off	# Days	Comments
Addition	7/1	7/31	31	
Noble Mountain	8/1	8/31	31	
Williams Valley	9/1	9/30	30	
Tal Wi Wi	Scheduled to be rested, but may be evaluated for use.			

The schedule & level of authorized use above is an estimate and may be modified at any time prior to or during the grazing season if utilization levels, identified below, are met, if water availability is inadequate, or for other resource management reasons.

2. UTILIZATION STANDARDS

The following utilization standards will be applied on the Williams Valley Allotment.

- 25% in the Tal Wi Wi Pasture
- 25% in the Addition Pasture
- 25% in the Williams Valley and Noble Mountain Pastures

3. KEY AREA MONITORING

Livestock grazing utilization monitoring may be conducted in key areas near the midpoint or end of the grazing period, or at the end of the growing season for each pasture. It is a permittees responsibility to act so that livestock grazing does not exceed the allowable use guidelines. Proper salt placement (more than a ¼ mile from water, and away from roads), hauling water, and herding or riding are recommended. If the problem cannot be corrected with preventative measures, then early exits from the pastures, adjustments in the AMP, stocking levels, or other management or administrative actions may be necessary.

The purpose of utilization monitoring is to ensure that herbaceous vegetation is managed to provide for suitable habitat and forage for various wildlife species, to meet physiological requirements for forage and browse plants, and promote or maintain proper range/watershed conditions.

District personnel may contact the permittees to coordinate site visits to monitor key areas, when practical. Permittee participation is encouraged. Forage utilization estimates will be consistent

with the Forest Service Range Analysis Handbook methodology, and may also include FS Regional stubble-height standards, as well as other techniques generally accepted in the field of range management.

4. RANGE IMPROVEMENTS

Maintenance of range improvements: Permittees will maintain assigned range improvements within their Allotment. This is in accordance with Part 3, clause 2 of the term grazing permit. If your neighbor is turning out before you on an adjacent pasture and the boundary fence is your responsibility, this fence must be repaired before your neighbor turns out. Routine maintenance of existing improvements does not require written clearance; however, construction or reconstruction of improvements must be authorized in writing from this office.

5. SPECIAL MANAGEMENT INSTRUCTIONS

Livestock Distribution: Salting and maintaining improvements are good ways to achieve proper livestock distribution. Frequent riding may be necessary to break up concentrations of livestock. A full time rider may be needed to herd livestock onto lightly used areas, reducing grazing pressure on riparian areas and meadows.

Fire Prevention: All vehicles should be equipped with a properly functioning exhaust system. A shovel and axe for use in extinguishing camp and forest fires should be carried. All open camp and branding fires, when allowed, must have a fire ring down to the mineral soil, and be handled in a safe manner. All State and local fire regulations and restrictions will be observed. Report any fires to the Springerville Interagency Dispatch Center at **928-333-6360**.

We appreciate your cooperation in the management of the Williams Valley Allotment. If you have any questions regarding these instructions, please contact my Rangeland Management Staff or myself at (928) 339-5000.
